TIPS ON WINTER FLYING

Presented by: Bruce Allred / Safety Program Manager, ICT FSDO

Winter flying in most parts of the United States can adversely affect flight operations. Poor weather conditions with fast moving fronts, strong and gusty winds, blowing and drifting snow, and icing conditions are just part of the conditions that require careful planning in order to minimize their effects.

The material presented in this program has been taken from many discussions of winter flying techniques with highly qualified pilots in various parts of the United States. Sadly, some of the material comes from experience gained in accident investigations.

This program is not designed discourage pilots from of flying their airplanes in the winter. However, it is designed to refresh the pilot's memory and knowledge in cold weather operations.
